

Education

National Kaohsiung University of Science and Technology

B.S. in Smart Commerce (IoT Program) 2022 – 2026

Consistent performance across technical coursework

3.28 / 4.3
(US 4.0 Scale: 2.42)

Academic Highlights:

Academic GPA

- **Data Systems:** Achieved high distinction in **Database Management (97)** and **Big Data Analysis & Implementation (92)**.
- **Systems & Infrastructure:** Completed advanced modules in **Linux System Administration (93)** with hands-on application.
- **Software Development:** Strong academic foundation in **Programming (90)** and **MVC System Architecture (90)**.

Featured Project: Proxy Shopping App

Excellence Award — Lead Frontend Developer & Assistant Backend Developer

1

Market Research & Demand Validation

Conducted market research to validate demand

2

Solution Built

Led UI/UX development ensuring intuitive user flow; Supported backend API integration

3

Result Achieved

Awarded **First Prize** — validated collaborative product development and execution skills

Featured Project: Proxy Shopping App

Login & Home Pages

- **User Onboarding:** Assisted in creating a straightforward entry interface with basic validation, aiming to make the registration process as smooth as possible for new users.
- **Marketplace Layout:** Helped build a dashboard with simple filtering options and a trending section to help connect buyers and sellers more efficiently.

Order Page

- **Order Tracking:** Participated in developing a basic order management panel that displays transaction statuses from pending to completed, helping users keep track of their requests.
- **Feedback Collection:** Included a standard 5-star rating system and review feature to gather valuable user feedback.

Featured Project: Proxy Shopping App

OrderDetail Page

- **Information Layout:** Worked on organizing essential transaction details—such as pricing, contact info and delivery notes—help prevent misunderstandings between parties.
- **Fulfillment Verification:** Added a simple invoice-upload feature within the workflow so users can provide a visual confirmation of delivery before the order is finalized.

Credit Score & Rule

- **Trust Mechanism:** Designed a basic behavioral credit system with milestone levels, hoping to encourage positive interactions and build a friendlier community.
- **Rule-Based Adjustments:** Set up a straightforward backend calculation that adjusts scores based on user behavior (such as small deductions for delays), serving as a gentle way to protect the platform's reliability.
